Type: ROUTINE INSPECTION
Date: 19-MAY-2015

3.53

PRIMARY ENCLOSURES.

There are sharp ends of wires protruding from the mesh comprising the wall of the guinea pig enclosure within reach of the rabbits. The sharp wires pose a injury hazard to the rabbits and must be removed.
Correct by 20 May 2015.

3.125(a) REPEAT

FACILITIES, GENERAL.

The wire mesh fencing making up the enclosure for the goats, llama and pig is in disrepair. The mesh fencing has sharp ends of wires exposed. There is an area of the previous chicken wire mesh behind the water receptacles in the corner that has a hole pushed through with sharp wires protruding. There are remnants of the old chicken wire fencing attached to a support post with sharp wires. There are several broken and exposed long sharp ends of wire protruding into the enclosure from the new fencing. There is a section of the new fencing that appears to have already been damaged by the animals that is bowed out, with some broken wires. The materials used for the enclosures must be of the appropriate material and strong enough for the types of animals housed there. The damaged fence poses an injury hazard. To ensure the health, safety and well-being of the animals the damaged fence must be replaced and or repaired.

Exit interview conducted with the owner.

This was a focused inspection to look at the enclosures addressed in the inspection report dated 17 March 2015.
