Type: ROUTINE INSPECTION
Date: 10-MAY-2023

3.15(e)(1) Direct

Primary enclosures used to transport live dogs and cats.

A flight containing 45 dogs arrived at JFK International Airport on May 10, 2023, at 1:53 pm ET, shipped from Qingdao International Airport (Qingdao, China)(AWB# 272-73364034).

The primary enclosures for the following dogs contained inadequate space:

- A female, brown and gray, poodle, "Maggie" (microchip # 900115002107784). "Maggie" measured 19.5 inches in length and 14 inches in height, while her crate measured 18 inches in length and 10.5 inches in height.
- A male yellow Golden Retriever "Kobe" (microchip # 900115002107398). "Kobe" measured 39 inches in length and 30 inches in height, while his crate measured 29 inches in length and 23 inches in height.

Inadequate space during transport can cause stress, uncomfortable conditions, and prevents normal postural adjustments. Primary enclosures used to transport live dogs must be large enough to ensure each animal has enough space to turn about normally while standing, to stand and sit erect and to lie in a natural position.

This inspection was conducted with animal facility representatives on 5/10/23. The exit interview was conducted by phone with an airline representative on 5/16/23.
