MONROE COUNTY CONSERVATION

Type: ROUTINE INSPECTION

Date: 07-JUN-2017

3.125(a)

FACILITIES, GENERAL.

The enclosure containing seven elk and four deer is constructed of woven wire fencing. Along multiple areas of the fencing the woven wire has broken creating sharp points at the level of the animals. A fence post from a previous project is lying in the enclosure and has a section of woven wire attached to it. This section of wire is creating sharp points that the animals could come into contact with as they move around the fence post. Sharp points could increase the risk of injury to the animals.

Outdoor housing facilities must be kept in good repair and protect the animals from injury. The facility must remove the sharp points or alter them in a manner that eliminates the injury risk towards the animals. The facility must ensure that the fencing remains in good repair at all times.

To be corrected by: June 21, 2017

Inspection and exit interview conducted with Kelly Maxwell, ACI and the facility representative.
