Type: ROUTINE INSPECTION
Date: 26-JUN-2017

2.40(b)(2) REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

There is an unknown ear med that has been transferred to a ketchup bottle that has no label and no instructions for use by the attending veterinarian. There is panacur that has been transferred to a mustard bottle that does not have a label on it. There are several dogs that have overgrown toenails.

Each dealer shall have an attending veterinarian. In the case of a part-time veterinarian formal arrangements shall include a written program to address proper methods to control, diagnose and treat disease and injuries.

Have your attending veterinarian write instructions for use and dosage of any medications kept on hand. All medications must be labelled with the drug contained and the expiration date of the drug. Improperly used and/or expired medications can be ineffective in treating disease or cause harm to the dogs. Toenails must be trimmed as often as necessary to prevent injury to the dog by ingrown toenail, or getting the nail caught and ripping it off.

2.50(a)(2) REPEAT

TIME AND METHOD OF IDENTIFICATION.

There is one litter of 9 puppies that does not have a cage cards. The licensee stated that the computer printer was not working. The adult dog named Reece was scanned and the chip did not match what was on the paperwork. The adult dog named Ben was scanned but no chip was found.

A class "A" dealer shall identify all live dogs and puppies on the premises.

Ensure that all dogs and puppies on the premises have appropriate identification so that they can be traced and tracked in case of disease outbreak.

3.1(e) REPEAT

HOUSING FACILITIES, GENERAL.

Prepared By: BONGARD CARRIE, A C I USDA, APHIS, Animal Care

Date:
28-JUN-2017

Received by Title: LICENSEE

Date:
28-JUN-2017

Inspection Report

The area where the food is stored has a shelf with an open box of dog treats on it. The box of dog treats has a hole in it that was chewed by mice.

All open supplies of food must be kept in leak-proof containers with tightly fitting lids to prevent contamination and spoilage.

Keep all open supplies of food in a container with a lid to prevent contamination by pests.

3.4(c)

OUTDOOR HOUSING FACILITIES.

There are still T posts used in several of the primary enclosures that have rust on them.

Building surfaces in contact with animals in outdoor housing facilities must be impervious to moisture.

All surfaces that come into contact with the dogs must be able to be cleaned and sanitized. Rust inhibits the effectiveness of cleaning and sanitizing the posts used in the primary enclosures for the dogs.

To be corrected by August 1, 2017.

3.6(a)(2) REPEAT

PRIMARY ENCLOSURES.

There are two dog houses that have wind-breaks that the dogs have torn off. This left the nails/screws that affixed the wind-break sticking out.

Primary enclosures for dogs must be kept in good repair and have no sharp points or edges that could injure the dogs.

Remove the nails/screws that are sticking out on the dog shelters to ensure the dogs do not get injured.

3.10 DIRECT REPEAT

Prepared By: BONGARD CARRIE, A C I USDA, APHIS, Animal Care

Date:

Inspection Report

WATERING.

Several dogs and a litter of 3 1/2 month old, weaned puppies did not have water at time of inspection. When offered water the dogs and puppies drank for 70 seconds plus straight. The microchip numbers for the adult dogs are ...4660,...3690...4650 and 5387 the id numbers for the puppies are 17-23, 17-26 and 17-29.

If potable water is not continually available to the dogs , it must be offered to the dogs as often as necessary to ensure their health and well-being.

It is abnormal for a dog or puppy to drink that vigorously or for an extended period of time unless they are not being offered enough water. All dogs and puppies must have an appropriate amount of water to sustain their health.

3.11(c)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

There is an accumulation of various construction material and extra dog supplies in the feed area. One of these items is a roll of insulation. When the roll of insulation was moved a large accumulation of mouse dropping was under it. There was also a large accumulation of mouse dropping on the shelf in the feed area and on a board that makes up the bottom of an enclosure near the food storage area. There is tall grass around the outdoor kennels to the North.

Premises where housing facilities are located, including buildings and surrounding grounds, must be kept clean and in good repair to reduce or eliminate breeding and living areas for rodents and other pests and vermin. Weeds, grasses, and bushes must be controlled so as to facilitate cleaning of the premises and pest control,

All areas in and around the housing area for the dogs must be kept clean and uncluttered, and weeds and grasses must be controlled to reduce areas for rodents to hide, reproduce and infest the premises. Infestation of mice can contaminate food sources for the dogs and cause disease in the dogs housed at the facility.

To be corrected by July 3, 2017.

3.11(d)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

There is a large accumulation of mouse feces in several areas in the feed room.

Prepared By: BONGARD CARRIE, A C I USDA, APHIS, Animal Care

Date:
28-JUN-2017

Title: ANIMAL CARE INSPECTOR 1053

Received by Title: LICENSEE

Date:
28-JUN-2017

Inspection Report

An effective program for the control of mammals that are pests, must be established and maintained so as to promote the health and well-being of the animals and reduce contamination by pests in animal areas.

Additional steps must be taken to reduce or eliminate the mouse infestation in the kennel area. Infestation of mice can cause disease in the dogs housed at the facility and contaminate food sources for the animals.

To be corrected by July 3, 2017.

Inspection conducted on June 26 2017 with the licensee. Exit conducted on June 28, 2017 with the licensee.
