Type: ROUTINE INSPECTION
Date: 19-JAN-2023

3.31(a)(1)

Sanitation.

There are accumulations of excreta and soiled bedding in four enclosures in rack # 1, housing adult guinea pigs and their offspring. Soiling bedding has not been removed in over a week. Ineffective and infrequent cleaning exposes the animals to increased ammonia odors and to potential disease hazards. Primary enclosures must be cleaned often enough to prevent accumulations of excreta and soiled bedding and must be sanitized at least once every two weeks. Correct by cleaning enclosures on a more frequent basis to prevent accumulations of excreta and soiled bedding. Correct by January 20, 2023.

This inspection and exit interview were conducted with the licensee.
