Type: ROUTINE INSPECTION
Date: 28-AUG-2023

3.15(a)(2)

Primary enclosures used to transport live dogs and cats.

A total of 35 dogs were inspected that arrived at JFK International Airport on August 28, 2023, shipped from Quindao, China on Kalitta Airlines, flight K4925 (Air Waybill #27273519051). The primary enclosure for "Chloe" (enclosure #2156, microchip# 900219001632156) contained loose hardware in the receptacle from parts of the lit water bottle. Loose hardware can result in a choking hazard to the animals contained within. Primary enclosure must be constructed so that there are no sharp points or loose hardware that could injure the dogs while transported.

3.15(e)(1) Direct

Primary enclosures used to transport live dogs and cats.

A total of 35 dogs were inspected that arrived at JFK International Airport on August 28, 2023, shipped from Quindao, China on Kalitta Airlines, flight K4925 (Air Waybill #27273519051).

The primary enclosures for the following dogs contained inadequate space:

- A female, black, Greyhound, "Hera" (microchip # 900239877803496). "Hera" measured 38 inches in length and 26 inches in height, while her crate measured 30 inches in length and 22 inches in height.
- A male, black and tan, German Shepherd "Zac" (microchip # 900239877803480). "Zac" measured 33 inches in length and 25.5 inches in height, while his crate measured 30 inches in length and 22 inches in height.
- A female, black and white, Dalmatian, "Judy" (microchip # 900219001536468). "Judy" measured 34 inches in length and 25 inches in height, while her crate measured 30 inches in length and 22 inches in height.
- A male, black and white, Siberian Husky "Ian" (microchip # 900239877803403). "Ian" measured 33.5 inches in length and 28 inches in height, while his crate measured 30 inches in length and 22.5 inches in height.
- A male, tan and white, Greyhound "Rod" (microchip # 900239877803499). "Rod" measured 33 inches in length and 25 inches in height, while his crate measured 30 inches in length and 22.5 inches in height.

Inadequate space during transport can cause stress due to uncomfortable conditions, and prevents normal postural adjustments. Primary enclosures used to transport live dogs must be large enough to ensure each animal has enough space to turn about normally while standing, to stand and sit erect and to lie in a natural position.

3.17(c)

Food and water requirements.

Inspection Report

A total of 35 dogs were inspected that arrived at JFK International Airport on August 28, 2023, shipped from Quindao, China on Kalitta Airlines, flight K4925 (Air Waybill #27273519051). Three enclosures contained detached food/water receptacles ("Rod" microchip# 900239877803499, "Zac" microchip# 900239877803480, "Mia" microchip# 900219001536290). Food and water receptacles must be securely attached inside the primary enclosure and placed so that the receptacles can be filled from outside the enclosure without opening the door.

This inspection was conducted with animal facility representatives on August 28, 2023. The exit interview was conducted with an airline representative by phone on September 1, 2023.
