

Inspection Report

City Of Chippewa Falls
30 W Central St
Chippewa Falls, WI 54729

Customer ID: **2920**
Certificate: **35-C-0015**
Site: 001
IRVINE PARK

Type: ROUTINE INSPECTION
Date: 15-JUL-2014

3.127(c)

FACILITIES, OUTDOOR.

There are puddles of standing water and areas of thick mud in the enclosure housing the two Watusi cattle. The animals have to pass through the standing water and mud to access their feeding station and shelter. The standing water also creates a suitable breeding environment for mosquitoes and other insect pests. A method of drainage must be developed to eliminate excess water from the enclosure. Correct by: August 15, 2014.

3.127(d)

FACILITIES, OUTDOOR.

There is an open side gate in the perimeter fence that surrounds the enclosures housing the bears, tigers, and hyenas. This side of the perimeter fence separates the dangerous animals from the petting zoo area. The open gate allows pedestrian traffic to flow between the two areas, but is not routinely supervised by zoo personnel and creates an opening in the the perimeter fence. The open gate does not restrict unauthorized people and unwanted animals from having access to the animals housed within and cannot function as a secondary containment system in the event of an animal escape. The open gate must be closed or corrected in some manner to eliminate an open area in the perimeter fence. Correct by: July 18, 2014.

Inspection and exit interview conducted with facility representatives.

End of report.
