Country Ark Farm
122 Genesis Dr
Milford, PA 18337

Customer ID: **22946**
Certificate: **23-C-0309**
Site: 001
COUNTRY ARK FARM

Type: ROUTINE INSPECTION
Date: 11-APR-2017

2.78(a)

HEALTH CERTIFICATION AND IDENTIFICATION.

Section 2.78(a) Health certificate: There was no health certificate for the vervet monkey that the facility personnel transported to Virginia on December 27, 2016 (on route to Tennessee). A health certificate from a licensed veterinarian within 10 days of transporting a nonhuman primate in commerce is required to insure the animal appears free of any infectious disease or physical abnormality which would endanger the animal or other animals or endanger public health. Correct by obtaining health certificates for nonhuman primates from a licensed veterinarian no more than 10 days prior to transporting in commerce. Correct from this day forward.

3.125(a)

FACILITIES, GENERAL.

Section 3.125(a) Structural strength: The following enclosures needed repairs:

- 1) The enclosure housing 2 Markhor goats had the bottom of the fence curling up above the ground for the section of fencing just past the shelter entrance on the left side (adjacent to the fallow deer enclosure). Hoof stock walk the fence line and may injure a foot or leg if caught in the curled up fencing. After the condition of the fencing was identified by the APHIS official, facility personnel repaired the fence during the inspection. Corrected during the inspection.
- 2) The enclosure housing 18 white sheep and 13 mouflon sheep share a common fence line. The metal farm gate between the enclosures had broken wire mesh fencing attached that may injure the animals rubbing against the metal points/ends. After the condition of the gate was identified by the APHIS official, facility personnel replaced the gate during the inspection. Corrected during the inspection.
- 3) The same enclosure identified in the above item 2 had three loose fence posts leaning into the white sheep enclosure to the left of the described gate. The fence posts must be secured to provide structural strength for the fencing to contain the animals in their enclosures and to prevent injuries. Correct by securing the fence posts so they are no longer loose. Correct by May 11, 2017.
