MOHICAN VINYL WINDOWS

Type: ROUTINE INSPECTION

Date: 24-JUN-2021

2.40(b)(2)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

A female red miniature poodle (Abigail #207) and a female Goldendoodle (Sophie #207) are both nursing females. Both of these dogs were found to be excessively thin with easily seen ribs, scapula, spine, and hip bones. The license stated that he is currently supplementing the feed of both of these dogs however the attending veterinarian has not been contacted concerning these dogs. Failure to provide appropriate methods to prevent and treat diseases can result in pain and suffering in these in dogs. Correct by contacting your attending veterinarian and follow all prescribed treatment and/or feeding recommendations.

Correct by: June 26, 2021

3.1(a)

Housing facilities, general.

There are many primary enclosure walls where the plastic coating has worn off of the metal wire. Many of these wires are broken or in various states of deterioration. This has resulted in several walls that have approximately 2 inch holes in them. These walls are not in good repair and are a potential injury hazard for the dogs. Correct this by repairing or replacing these areas.

3.1(c)(1)(i)

Housing facilities, general.

Several of the primary enclosure doors are excessively rusty. This rust does not allow these doors to be adequately cleaned and sanitized and may affect their structural strength. Correct this by repairing or replacing these doors.

Correct by: July 24, 2021

3.1(c)(3)

Housing facilities, general.

There are many surfaces in contact with the dogs that are dirty and require cleaning. This includes doggy doors and entryways, walls and tops of enclosures, and the floors of several enclosures. These surfaces are covered with organic material and have various degrees of staining. These dirty surfaces are a potential disease hazard to the dogs and do not satisfy accepted cleanliness standards. Correct this by cleaning all surfaces in contact with the dogs on a daily basis.

Correct by: June 26, 2021

3.6(a)(2)

Primary enclosures.

Several whelping boxes have carpets that are worn and are severely frayed. The loose frayed ends are a potential ingestion hazard to the puppies should they choose to eat these. The licensee must ensure that all carpets are free of this fraying to protect the puppies from injury. Correct this by replacing and maintaining these carpets.

3.9(b)

Feeding

Several of the self-feeders have caked feed on the metal flow control door on the inside of the feeder. This caking of feed can be a source of mold and deterioration of the feed and can be a potential disease hazard to the dogs. Correct this by cleaning and maintaining all self-feeders.

Correct by: June 26, 2021

3.11(a)

Cleaning, sanitization, housekeeping, and pest control.

There is an excessive accumulation of feces and spent feed under the outdoor runs on building #3. This accumulation is contributing to the odors in this facility, may contribute to pests such as flies, and will increase disease potential to the dogs. Correct this by increasing the frequency of cleaning under these primary enclosures.

Correct by: June 26, 2021

This inspection and exit interview were conducted with the licensee.
