BARN HILL PRESERVE OF DELAWARE

Type: FOCUSED INSPECTION
Date: 01-MAR-2018

3.127(d)

FACILITIES, OUTDOOR.

Since the last inspection, a lynx and Asian clawed otters have been housed at the facility in outdoor enclosures. There is no perimeter fence around the property or the enclosures. A perimeter fence prevents unwanted animals and unauthorized persons from passing through, over, or under it to gain access to animals in enclosures. The perimeter fence can also serve as secondary containment should an animal escape from its enclosure. An appropriately constructed perimeter fence, at least 8 feet in height must be constructed around the lynx enclosure. Additionally, an appropriately constructed perimeter fence, at least 6 feet in height, must be constructed around the Asian clawed otters. The perimeter fences must also extend a sufficient distance from the outside of the primary enclosure, at least 3 feet, to restrict direct contact of the public and unwanted animals with the animals within the enclosures. Alternatively, an 8 foot fence can be constructed around the property that will encompass the Asian clawed otter and lynx enclosures. Correct by March 30, 2018

This inspection and exit interview were conducted with the animal keeper and co-owner.
