Site: 001
BRIAN AND BECKY HABERMAN

Type: ROUTINE INSPECTION
Date: 16-MAY-2019

3.1(c)(1)(i)

HOUSING FACILITIES, GENERAL.

* Excessive rust was observed on one galvanized metal gate frame. Two dogs are in contact with the affected surface area located in outdoor housing. The affected surface was rough and jagged in appearance. Rust can erode and deteriorate all metal surfaces to the point that the metal surfaces can no longer be readily cleaned and sanitized. Excessive rust affects the structural integrity or strength of all metal surfaces. Surfaces that come in contact with dogs must be free of excessive rust. Failure to adequately clean and sanitize any surface that is rough or rusted could play a role in disease transmission. The licensee must ensure that all surfaces be free of excessive rust that prevents the required cleaning and sanitation or affects the structural strength of the surface. Correct by 5/30/19.

3.125(a)

FACILITIES, GENERAL.

* An estimated 20 ft. section of eight ft. high woven wire fencing is bent in half. One camel is in contact with the affected fencing located in an outdoor enclosure. Bent fencing affects the ability of the fencing to contain the animal. In addition, this could also lead to potential injury to the animal creating a negative impact on the animal. The licensee must ensure that outdoor housing facilities shall be maintained in good repair to protect the animals from injury. Correct by 5/23/19.

* The facility inspection and exit briefing done on 5/16/19 were conducted with the licensee.
