Bridgeton, NJ 08302

Customer ID: **2053**
Certificate: **22-C-0007**
Site: 001
Cohanzick Zoo

Type: ROUTINE INSPECTION
Date: 01-AUG-2023

3.84(d) Repeat

Cleaning, sanitization, housekeeping, and pest control.

A bees nest is present, outside of the owl monkey's indoor enclosure. According to staff, the bees were found to be able to enter the indoor enclosure through the building. This bees nest must be removed in order to protect the health and well-being of the monkey housed there-in. The monkey has been housed in a different area to protect it from injury.

However, an effective program for control of insects, external parasites affecting nonhuman primates, must be established and maintained so as to promote the health and well-being of the animals and reduce contamination by pests in animal areas.

3.131(c) Repeat

Sanitation.

* The wood trim, that runs across the front of the soffit of the leopard enclosure viewing window, has been water logged and is now rotted. This deterioration leaves the soffit in disrepair. The damaged soffit should be repaired so that it facilitates the prescribed husbandry practices.

* There is an overgrowth of bamboo inside of the fishing cat enclosure. The bamboo provides a natural environment as well as areas of security for the fishing cats housed there-in. The leaf growth of the bamboo has gone through and above the top, wire mesh of the enclosure. The overgrowth at the top could weaken and damage the top wire mesh. The bamboo should be trimmed to thin out the overgrowth and to prevent damage to the top wire mesh.

Premises (buildings and grounds) shall be kept clean and in good repair in order to protect the animals from injury and to facilitate the prescribed husbandry practices set forth in this subpart.

This inspection and exit briefing were conducted with the curator.
