3.127(d)

Facilities, outdoor.

The enclosure housing the wallaby is not surrounded by a perimeter fence. Fencing material is present but construction has not been completed.

Not having an appropriate perimeter fence exposes the wallaby to potential predators and/or unauthorized people who may cause harm to the animal. If the wallaby escapes its primary enclosure, not having a perimeter fence provides no secondary containment for the animal.

The regulations state that all outdoor housing facilities must be enclosed by a perimeter fence that is of sufficient height to keep animals and unauthorized persons out. The fence must be constructed so that it protects the animals in the facility by restricting animals and unauthorized persons from going through it or under it and having contact with the animals in the facility, and so that it can function as a secondary containment system for the animals in the facility. It must be of sufficient distance from the outside of the primary enclosure to prevent physical contact between animals inside the enclosure and animals or persons outside the perimeter fence.

Correct by 15December2023.

This inspection and exit interview were conducted with facility representatives.
