### 3.153(b)

#### Primary enclosures.

Most of the raptors at the facility were in their indoor enclosures which do not provide enough space for adequate freedom of movement. The birds while housed indoors are housed in stainless steel enclosures that do not allow them to fully extend their wings or make normal postural and social adjustments such as change perches and footing. These birds spend up to 12 hours in these enclosures when not outside in the mews. The facility states that they cannot maintain the birds overnight in their large outdoor mews due to potential safety concerns. These birds must be housed in primary enclosures that allow the birds to make normal postural and social adjustments with space for adequate freedom of movement. In addition, the attending veterinarian must consult with the facility to ensure the space in all enclosures is adequate. This needs to be addressed for the overall health of the birds.

Correct by: Oct 1, 2023

This inspection and exit interview were conducted with a facility representative.

Additional Inspector: Dr Jason Sifarovski, Veterinary Medical Officer
