Type: ROUTINE INSPECTION
Date: 10-MAR-2022

3.52(d)

Facilities, outdoor.

Two rabbits have been allowed to free range behind the market; they have access to food, water, and shelter however without being in a fenced/enclosed area they are not protected from predators or possible injury. Ensure that the rabbits are enclosed in proper area that protects them from predators or injury.

Correct by 3/12/2022.

3.125(a)

Repeat

Facilities, general.

***The elk's enclosure has a loose panel in the middle and loose panel wire by the watering area. For safety, the facility reports maintenance has been postponed until next week to be sure the elk is out of rut and has dropped its antlers. Loose panels and panel strands could injure the elk. Maintain the elk enclosure free from loose panels and loose panel wires. Ensure that a safe method of correcting these areas is employed and that in the future a safe method of maintaining the elk's enclosure is in place year-round (options were discussed)

***The middle fence-line in the fallow deer pen is in disrepair and has loose strands in it that the deer could contact. Loose wire could cause injury. Ensure that animal enclosures are free from loose wire and free from sharp points.
