Customer ID: **44365**  
Certificate: **65-C-0553**  
Site: 001  
ANGIE HALES

Type: ROUTINE INSPECTION  
Date: 10-MAR-2014

---

### 3.56(a)(1)

#### **SANITATION.**

There were two approximately 2-3 x 4 inch mounds of dried fecal material in a wire-bottom primary enclosure shared by two rabbits. One of the mounds was located in front of the feeder and the rabbits would only be able to access the food through the mound. Primary enclosures shall be kept reasonably free of excreta, hair, and cobwebs by periodic cleaning to prevent disease and infestation of rabbits. To be corrected by 3/24/2014.

### 3.125(a)

#### **FACILITIES, GENERAL.**

Two baby goats were observed browsing on the property outside the large goat enclosure. The goats were small enough to have slipped through the openings in the wire fence. Ability of the young goats to escape from the enclosure can increase risk of predation, loss, or injury of the goats. Outdoor housing facilities shall be maintained in good repair to protect animals from injury and contain the animals. To be corrected by 3/24/2014.

The inspection and exit briefing were conducted with the owner.
