Type: ROUTINE INSPECTION
Date: 11-MAY-2016

3.25(c)

FACILITIES, GENERAL.

Storage. There is hay stacked on the floor by the back wall and an open bag of shavings on the floor of the animal room. Supplies of food and bedding shall be stored in facilities which adequately protect such supplies against spoilage, deterioration, infestation, or contamination by vermin.

Hay must be stored off the floor and away from walls to allow cleaning, prevent contamination, or spoilage of the food. Open bedding must be stored in leakproof containers to prevent contamination and prevent pest problems. Licensee must ensure that all food and bedding is adequately stored to protect supplies against spoilage, infestation, or contamination. Correct by May 14, 2016.

3.28(c)(1)(3)

PRIMARY ENCLOSURES.

There were 26 weanling guinea pigs housed in an enclosure measuring 42" by 27.5 " or 1155 square inches of floor space. The maximum number of guinea pigs allowed in that enclosure would be 19 based on the size of the enclosure and the weight of the weaned guinea pigs.

Insufficient space can lead to aggression, undue stress and creates conditions in which promotes the spread of disease. Weanlings weighing up to 360 grams require 60 square inches of floor space per animal. Licensee separated the weanlings into two enclosures at time of this inspection.

Licensee must ensure that adequate space is provided for the animals. The space provided must be sufficient for each guinea pig contained to make normal postural adjustments with adequate freedom of movement. Sufficient space will decrease the likelihood of aggression, stress, and risk of disease. Correct from this day forward.

An exit briefing was conducted with the owner.
