Certificate: **42-A-1319**
Site: 001
CAPTIVA KENNEL INC.

Type: ROUTINE INSPECTION
Date: 05-OCT-2016

2.40(b)(2) REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

A female Dachshund puppy appears mildly dull and lethargic. She was observed sitting quietly in the food receptacle while the other puppies actively bounced around and on her. She also has mildly thinning hair on the sides of her body and patchy hair loss on her face. The hair loss on the face is mainly located on the bridge of her nose and around both eyes. This puppy is mildly to moderately thin with a prominent backbone. The gums were moderately pale in color. The licensee stated that this puppy was in "sugar shock".

Conditions such as this can lead to further health complications. This puppy must be examined by a licensed veterinarian in order to ensure that an accurate diagnosis is obtained and an appropriate treatment plan is developed and followed. This information, including the diagnosis, treatment and resolution of the condition, must be documented and made available to the inspector upon request. The licensee must ensure that all animals receive appropriate veterinary care at all times.

3.1(f)

HOUSING FACILITIES, GENERAL.

There are four empty bags of dog food on the floor of the building housing the Labradors. The bags are located directly across from the dog enclosures. The licensee stated that she intends to burn them this weekend. The empty food bags could attract pests such as insects or mice.

Trash containers in housing facilities must be leak-proof and have tightly fitted lids on them at all times. The licensee must place the empty dog food sacks into a leak-proof container with a tightly fitted lid if they are to be stored within the Labrador building. The licensee removed the sacks from the building at the time of the inspection.

Inspection and exit interview conducted with Kelly Maxwell, ACI, Heather Cole, VMO and the facility representative.
