PARK

Type: ROUTINE INSPECTION
Date: 10-NOV-2021

2.40(b)(2)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

Two of the servals had hair loss, one along it's back and one around it's neck. According to the facility representative the veterinarian is aware of the problem and has given instructions on control and treatment however that treatment had not been provided at the time of this inspection.

The licensee is responsible for ensuring appropriate methods to prevent control, diagnose, and treat illnesses and injuries occurs in a timely manner to prevent the animals from experiencing discomfort associated with the condition. The caracals need to receive the treatment prescribed for this condition if it has not already been given.

To be corrected by: Nov 25, 2021

3.75(c)(3)

Housing facilities, general.

Several of the primate enclosures do not appear to have been thoroughly cleaned recently. The lemur enclosure had a platform that had monkey biscuits along with old feces that was smashed flat and dried. One of the baboon enclosures had several areas with old, dried feces. One of those areas was on a picnic table that also had pieces of monkey biscuits. Enclosures with dirt floors must be spot-cleaned with sufficient frequency to ensure all animals the freedom to avoid contact with excreta, or as often as necessary to reduce disease hazards, insects, pests, and odors. The primate

3.81 Repeat

Environment enhancement to promote psychological well-being.

Facilities that house primates must have an appropriate plan for environmental enhancement adequate to promote the psychological well-being of nonhuman primates. The current plan of environmental enrichment includes platforms, ropes/swings, and "toys" that are to be changed every 2 weeks. There is no guidance on facilitating cognitive/sensory enrichment.

There is also no indication that the current plan is being followed. There were minimal enrichment items in the primate enclosures and all the cage furniture, platforms and swings, were unchanged from the previous inspection.

3.131(a) Repeat

Sanitation.

The otter enclosure, both inside the holding area and outside in the viewing area, did not appear to have been cleaned recently.

The outside area consisted of a pool surrounded by round river rocks. There was an accumulation of old feces or some other substance next to the area where the food was placed.

One corner of the inside holding area had a large accumulation of feces.

Fecal material, old food, dirty bedding/dirt, and other debris need to be removed from the primary enclosures as often as necessary to prevent contamination of the animals and to minimize disease hazards and to reduce odors.

The otter enclosure needs to be cleaned more frequently so that the health of the otters is not compromised
