Certificate: **23-B-0227**
Site: 001
RAYMOND FISHER

Type: ROUTINE INSPECTION
Date: 12-JUL-2016

3.30

WATERING.

There were accumulations of dirt and debris by the automatic water valves and inside PVC drainpipes for four racks of wire enclosures. These accumulations by the automatic water valves and inside the drainpipes exposes the guinea pigs to potential infections with bacteria, fungi, and parasites. Inadequate cleaning and sanitation of the automatic water valves and drainpipes can result in contamination of the guinea pig colony. Correct by keeping the water lines and surrounding areas clean to ensure the health and well-being of the guinea pigs. Correct by July 16, 2016.

3.31(a)(1)

SANITATION.

The guinea pig enclosures had clean bedding, but there is a buildup of brown and roughened scale on the sides and floor of the plastic tubs. Ineffective cleaning and/or infrequent sanitation exposes the animals to disease hazards. Correct by ensuring that all primary enclosures are cleaned and sanitized often enough to prevent an accumulation of excreta and debris. Additionally, ensure that the primary enclosures are sanitized at least once every two weeks. Correct by July 16, 2016.

3.31(b)

SANITATION.

Housekeeping. The floor contains accumulations of spilled feed, shavings and debris. There are accumulations of dust, dirt and cobwebs on the ceiling and walls of the animal building. Animal facilities must be kept clean to ensure good quality of air for the animals and to prevent unnecessary disease risks. Ineffective cleaning exposes the animals to disease hazards and health problems. Correct by ensuring the premises are kept clean, including: removing accumulations of dust, cobwebs, spilled feed, shavings, and debris; routinely dusting off and cleaning all surfaces on the inside of the facility; and maintaining a level of general cleanliness to support good animal husbandry and health. Correct by July 20, 2016.

An exit briefing was conducted with the owner's father.
