Certificate: **84-C-0127**
Site: 001
Bath, Inc.

Type: ROUTINE INSPECTION
Date: 13-JUL-2017

2.40(a)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

***The Program of Veterinary Care states that Clostridium 8 way and tetanus vaccinations will be given annually to the two reindeer. It also states that Panacur is to be given twice a year to the two reindeer.

The facility was unable to provide any veterinary records or documentation indicating that this preventative treatment protocol is being followed by the facility.

The facility must follow the treatment plans provided by the attending veterinarian on the Program of Veterinary Care. Failure to do so reduces the veterinarian's ability to ensure the provision of adequate veterinary care. The licensee shall assure that the attending veterinarian has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

To be corrected by: July 28, 2017

2.40(b)(2)

REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The two reindeer cows, Bossy and Jingles, have excessively overgrown hooves due to a lack of routine hoof trimming. Several of the toes on both reindeers are crossing and some of the dewclaws are making contact with the ground. Facility records indicate that the last time the reindeer received hoof trimming was in November 2016.

Excessive hoof growth can lead to gait abnormalities which can cause a change in the toe joints and may contribute to osteoarthritis, especially in older animals such as these. The facility must adhere to the plan it created which states that the reindeer's hooves will be trimmed twice a year. As part of the facility's program of preventative veterinary care, the licensee must ensure that all animals receive appropriate hoof care in a timely manner.

3.130

WATERING.

***There was an excessive buildup of green debris covering all of the interior surfaces of the only water receptacle in the enclosure that contains two reindeer. The water was green and there were hundreds of insect larvae moving

Inspection Report

about in the water.

Animals must be provided with clean, potable water to minimize disease hazards and to ensure that they maintain adequate hydration.

Water receptacles must be maintained in a clean and sanitary condition. They should be cleaned at a frequency that is adequate to maintain standard husbandry practices.

To be corrected by July 16, 2017

This inspection and exit interview were conducted with a facility representative, APHIS intern, and APHIS inspector.
