

Inspection Report

Glenn Donnelly
2116 County Road 48
Groveland, FL 34736

Customer ID: **6000**
Certificate: **21-C-0167**
Site: 003
Glenn Donnelly

Type: RE-LICENSE INSPECTION
Date: 13-AUG-2024

2.126(a)(2)

Access and inspection of records and property; submission of itineraries.

At the time of inspection, the program of veterinary care, the environment enhancement plan for nonhuman primates, the contingency plan, and the acquisition records were not available for review by the inspector.

Review of records required by the Animal Welfare Act facilitates the inspection process by allowing the inspector to determine compliance and evaluate animal welfare. The facility shall ensure that the records required to be kept by the Animal Welfare Act and the regulations are complete and available for USDA APHIS officials to examine.

3.75(e)

Housing facilities, general.

In the kitchen, there is spoiled produce being stored in the refrigerators and on the counters which is causing the room to have an unpleasant odor. Inside the refrigerators, there is a head of lettuce with diffuse black discoloration, strawberries covered in a fuzzy growth, and bananas that have darkly discolored peels that are starting to leak fluid. On the counters, there are packages of corn on the cob with fuzzy growth and discoloration, shriveled onions, and a box of unrefrigerated produce covered in small ants. There is no separation between what is to be fed to the gibbons and what is for disposal. Additionally, there is a container of poison rat bait being stored on top of the refrigerator and pieces of chewed bait could be seen on top of the counter where food is stored.

Spoiled perishable items can further compromise other supplies of food stored in close proximity to them or attract unwanted pests as they continue to degrade. Ingestion of contaminated feed can cause illness in the animals. Storing toxic substances in food storage areas can cause illness and harm to animals. Supplies of food and bedding must be stored in a manner that protects the supplies from spoilage, contamination, and vermin infestation. The supplies must be stored off the floor and away from the walls, to allow cleaning underneath and around the supplies. Food requiring refrigeration must be stored accordingly, and all food must be stored a manner that prevents contamination and deterioration of its nutritive value. Substances that are toxic to the nonhuman primates but that are required for normal husbandry practices must not be stored in food storage and preparation areas, but may be stored in cabinets in the animal areas.

3.84(d)

Cleaning, sanitization, housekeeping, and pest control.

Inspection Report

In the kitchen, there is an excessive amount of rodent feces on the floor and in empty boxes around the room. There are also piles of insulation debris in areas where rodents have chewed through the wall. There is evidence of attempts to control the rodent issue, including poison bait seen in the kitchen.

Pests such as rats can spread disease and contaminate food, surfaces, and animal housing areas. An effective program for control of insects, external parasites affecting nonhuman primates, and birds and mammals that are pests, must be established and maintained so as to promote the health and well-being of the animals and reduce contamination by pests in animal areas.

This is a 1st Re-License Inspection for a Class "C" license. The inspection and exit briefing were conducted with the applicant.

All items must be in compliance within 2 more inspections or by 10/12/2024 or the applicant will forfeit the license fee and must wait 6 months to reapply. Please contact your inspector to schedule your next Re-License Inspection.

Regulated activity can continue under your existing USDA license until it expires.
