LABORATORY ANIMAL FACILITY

Type: FOCUSED INSPECTION

Date: 06-JUN-2023

---

### 2.32(c)(3)

#### Personnel qualifications.

1. According to facility documentation, one pig assigned to protocol MED021011Y did not receive analgesic medication as described in the IACAC approved protocol. The protocol stated that for 3 days following a procedure the pig would receive carprofen twice daily. The date of the procedure was 11/3/22 and according to medical records the second(pm) dose was not administered on the second day (11/5/23). This could negatively affect the animal if analgesic medication is not administered at the prescribed frequency. A clinical veterinarian assessed the animal and no break through pain was reported.

2. According to facility documentation, PI lab staff deviated from protocol during procedures involving three pigs which were assigned to IACUC approved protocol 202100046. The deviations included exceeding the anesthetic timeline three-fold for two different surgical procedures, as well as failing to take a blood gas measurement or provide supplemental heat.

Failure to follow the IACUC approved protocol can negatively affect the animals health and well being if procedures are omitted and analgesics or anesthesia is changed without IACUC approval.

The research facility is responsible for ensuring that all personnel involved in animal care, treatment, and use are adequately trained to perform their duties.

The research facility acted promptly to address these incidents by conducting an IACUC investigation, reporting the incidents to OLAW and swiftly implementing appropriate corrective actions.

\*\*\*\*\*These items have been corrected by the facility.

This inspection and exit interview were conducted with the facility representatives.
