Type: ROUTINE INSPECTION
Date: 19-JUN-2018

3.62(g)

PRIMARY CONVEYANCES (MOTOR VEHICLE, RAIL, AIR, AND MARINE).

The facility owner was returning from a mobile exhibit about 70 miles away from the facility with a large animal/livestock type trailer at the beginning of this inspection. One wire cage housing five young rabbits was inspected on a shelf built into the forward part of the trailer. The temperature adjacent to the rabbit cage was 94 degrees F (using Kestrel). No auxiliary ventilation devices such as fans, blowers or air conditioners were in use. The rabbits were all noted to be breathing rapidly and shallowly. The rabbits were immediately moved out of the trailer and into their home enclosure where they spread themselves out and cooled off. Within approximately 15 minutes their breathing returned to normal. Rabbits are known to be sensitive to high temperatures which can lead to heatstroke. The ambient temperature with the animal cargo space shall not exceed 85 deg F. Correct from this day forward.

This inspection and exit interview were conducted with undersigned owner.
