Type: ROUTINE INSPECTION

Date: 09-SEP-2024

3.127(b)

Facilities, outdoor.

A female adult North American porcupine was housed outdoors in a primary enclosure that lacked appropriate shelter in case of inclement weather. The round wire enclosure had a roof over the top and was covered nearly halfway around the enclosure by metal sheeting on one side. There is approximately a 2-foot gap between the metal sheeting and roof. The floor consisted of a few inches of woodchips on top of a wooden platform. There was no shelter inside the enclosure to fully allow the animal to hide or to shelter from strong winds or blowing precipitation. The facility representative stated that this porcupine is well-acclimated to weather conditions at this time of year and they do place an igloo kennel shelter inside the enclosure from October until April. Failing to provide an appropriate shelter at all times may lead to animal discomfort, stress, and illness. An appropriate shelter must be provided within the outdoor primary enclosure to allow the porcupine protection from harsh elements and inclement weather year-round.

***This was corrected prior to the exit interview.

This inspection and exit interview were conducted with the facility representatives.
