### 2.40(b)(2)

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

One llama, white with brown markings, is in need of foot care/trimming on all four feet. The hooves are overly long and are curling and rotating due to their excessive length. While standing still it appears the llama's foot/ankle joint is positioned/held in an abnormal, dropped position due to the excess length of the hooves. The llama was observed walking around a large area without any obvious limp. The licensee stated she did not know when the farrier would be available to trim the hooves. Excessively long hooves can lead to lameness and be potentially painful. All animals requiring hoof trimming need to have their hooves trimmed promptly and as frequently as necessary for foot health.

To be corrected by: May 22, 2017

This inspection and exit interview were conducted with licensee.
