Type: ROUTINE INSPECTION
Date: 22-JUN-2021

2.126(a)(2)

Access and inspection of records and property; submission of itineraries.

At the time of inspection, only one health certificate was available for review. The rest of the records required by the Animal Welfare Act were not available at the time of inspection for examination by APHIS officials. According to the licensee, the records had been taken offsite recently.

Correct for all future inspections.

3.131(b)

Sanitation.

In enclosure A10, two tigers were housed in a single enclosure with a small lockout since arrival approximately a month ago. During the inspection, initially the white tiger was in the lockout, while the yellow tiger was in the primary enclosure. The lockout appeared to have been heavily used and contained a damaged and dirty water container, dried out food attracting flies and a layer of fur and puddles on the dirt floor. When the lockout door to the primary enclosure was opened, the yellow tiger joined the white tiger in the lockout, allowing the staff to clean the primary enclosure. While in the secondary, both tigers were unable to avoid the saturated areas of the enclosure and their paws were dirty. After cleaning, the tigers were both moved into the primary and a stick was used to remove the leftover food items and solid

Inspection Report

excreta by pulling it to the edge of the lockout. With animals in the primary, there is no alternate entrance to access the lockout to safely clean it. The dirty, damaged water container, fur and standing water on the dirt floor could not be adequately cleaned to prevent contamination and minimize disease hazards to the animals.

Correct by 15 Aug 21

3.132 Critical Employees.

A long term volunteer was not able to follow the facility protocols and professionally acceptable husbandry practices due to the facility housing a leopard in an enclosure without a lockout. The facility cleaning procedures require the use of a lockout to clean the enclosures, but an adult leopard was in an enclosure (C5) without a lockout. In February, an incident occurred at the facility where a senior volunteer was injured by the leopard while in the enclosure with him and subsequently the leopard was able to exit the primary enclosure. Following this incident, the leopard was moved to an enclosure (A12) with a lockout.

Correct from this day forward.

This inspection and exit interview were conducted with the licensee.
