Site: 001

NICKEL CITY REPTILES AND EXOTICS

Type: ROUTINE INSPECTION

Date: 09-AUG-2016

---

### 3.75(c)(1)(1)

#### HOUSING FACILITIES, GENERAL.

\*\*\* The enclosure housing one ring tail lemur has metal poles crossing the enclosure acting as supports for the animal to climb and sit on. These poles have sections where the paint is missing and the poles are rusted. These poles can no longer be effectively cleaned and sanitized and need to be replaced to facilitate cleaning of the enclosure. This needs to be addressed for the health of the animal.

Correct by: Aug 23, 2016

### 3.84(b)(2)

#### CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

\*\*\* The marmoset enclosure has a build up of grime and debris along the front and sides of the enclosure. This enclosure needs to be cleaned as often as necessary to prevent this accumulation of debris. This needs to be addressed for the health of the animals.

Correct by: Aug 11, 2016

### 3.126(a)

#### FACILITIES, INDOOR.

\*\*\* At the time of the inspection the temperature inside the facility was 86 deg F according to the licensee's wall thermometer. The facility had fans running but no additional ability to cool the area down. Three chinchilla's were housed in an aquarium with a vented top. This enclosure does not allow adequate air flow to provide for the animals comfort. Chinchilla's are animals that do not tolerate heat well and can become stressed if the temperatures are above 80 deg F. The temperature of the facility is not compatible for the health and comfort of these animals. The facility needs to address the temperature and have methods in place to sufficiently cool the area down for the comfort of the animals.

3.128

### SPACE REQUIREMENTS.

\*\*\* The facility is housing two camels in stalls that are 12x12. Currently the animals are walked outside daily but do not have access to a larger outdoor pen that allows for adequate freedom of movement. Camels are very social and have been known to run, and dust bathe which is normal postural movements for these animals. These animals need to have a pen that allows for room for these behaviors for their health and well being.

Correct by: Oct 25, 2016

\*\*\* The African crested porcupine is housed in an enclosure that does not provide enough space for adequate freedom of movement. This is a younger solitary animal and needs to have an area that allows it to hide as a social adjustment. This needs to be addressed for the health of the animal.

Correct by: Aug 20, 2016

An exit briefing was conducted with ACI Andrea D'Ambrosio, C.S. Cindy Neis and the licensee.
