BACK TO NATURE WILDLIFE INC

Type: ROUTINE INSPECTION

Date: 11-AUG-2022

3.84(d)

Cleaning, sanitization, housekeeping, and pest control.

There was an excessive congregation of bees on and around the fruit for the lemur. The presence of these insects on the food may affect the wholesomeness of the food and pose a health risk directly to the animal (bee stings). Licensees must establish and maintain an effective pest control program so as to promote the health and wellbeing of the animals and reduce contamination by pests in animal areas.

Correct by August 26th, 2022.

3.125(a)

Facilities, general.

The wooden platform in the red fox enclosure was well-worn and showed evidence of deterioration at the center of the resting spot. The weakened area can give way and pose an entrapment risk to the animal contained in the enclosure. The outdoor housing facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury.

Correct by August 17th, 2022.

This inspection and exit interview were conducted with the Assistant Director.
