Customer ID: **2241**

Certificate: **23-C-0009**

Site: 002

ZOOLOGICAL SOCIETY OF  
PITTSBURGH

Type: ROUTINE INSPECTION

Date: 26-AUG-2021

---

### 3.131(d)

#### Sanitation.

Throughout the hay storage shed, there were several fresh accumulations of avian feces on the floor. Upon entering the building, approximately 10 pigeons were observed flying from the shed, and several broken eggshells were noted on the floor. The facility stated that the two main doors to the shed remain open during the summer to allow for air circulation, but there are no current pest control measures to deter the avian pests from entering the shed. Failure to maintain an effective program to control avian pests can have a negative impact on the the health of the animals through the spread of disease or contamination of animal areas and feed. The licensee must correct by implementing a safe and effective pest control program in all food storage areas.

Correct by: September 24, 2021.

This inspection was conducted with the elephant care staff, Attending Veterinarian, and the Director of Science and Conservation.

The exit briefing was conducted with the Pittsburgh Zoo President & CEO.
