Certificate: **65-C-0570**

Site: 001

CITY OF JACKSON
DEPARTMENT OF PARKS AND
RECREATION

Type: ROUTINE INSPECTION

Date: 20-APR-2022

3.80(a)(2)(ix)

Primary enclosures.

The indoor area of the enclosure housing 2 adult spider monkeys (1 male, 1 female) has surfaces that cannot be readily cleaned and sanitized. There are areas of rust along the bottom of the chain link enclosure. The sliding metal door between the two sides of the enclosure has pitted, flaking rust along its bottom edge. The wooden resting platform on the left side of the enclosure has an approximately 2 inch by 3 inch area on its surface which has been gouged out, and the underlying wood has an irregular surface. Animal-contact surfaces in primate enclosures must be maintained so that they can be readily cleaned and sanitized, to prevent the accumulation of organic material or harmful bacteria. Correct by 6/1/22 by ensuring that surfaces in contact with nonhuman primates can be readily cleaned and sanitized, or are replaced when worn or soiled.

This inspection and exit interview were conducted with the Assistant Animal Care Supervisor.
