PEACEABLE KINGDOM

Type: ROUTINE INSPECTION
Date: 13-JAN-2016

3.56(a)(1)

SANITATION.

Section 3.56(a)(1) Cleaning of primary enclosures: There is an excessive amount of feces on the floor of the sheltered portion of the following two rabbit enclosures: the first rabbit enclosure on the left housing 3 rabbits and the third rabbit enclosure on the right housing 5 rabbits. The outdoor temperature was below freezing during the inspection and the rabbits were in the sheltered area on top of the fecal accumulations in the bedding. Accumulations of feces may soil the animals, cause odors and are a potential disease hazard for the animals. Once the APHIS official identified the condition of the floors of the shelters, the licensee cleaned the floors. Correct by maintaining the floors of the sheltered area of the enclosures reasonably free of excreta/feces for the health and comfort of the animals from this day forward.

3.75(c)(3)

HOUSING FACILITIES, GENERAL.

Section 3.75(c)(3) Cleaning: There are excessive amounts of feces in the bedding on the floors of the indoor portion of the enclosures housing a ring-tailed lemur, a brown lemur and a Japanese snow macaque. The licensee informed the APHIS official that these enclosures needed cleaning before the building was entered. These three enclosures are not being spot cleaned at least once a day. Accumulations of feces may contaminate the enrichment items on the floor or the enclosure, cause odors and are a potential disease hazard to the animals. During the inspection the licensee cleaned the floors of these enclosures. Correct by ensuring that the floors of the primate enclosures are spot cleaned daily and sanitized in accordance with Section 3.84 of this subpart to prevent accumulations of excreta/feces or disease hazards from this day forward.

3.128

SPACE REQUIREMENTS.

Section 3.128 Space requirements: The capybara is housed in an indoor enclosure without a water receptacle that is large enough for it to at least submerge its body into water. The capybara has a water dish and a shallow pan with about 2 inches of water where it defecates. Under natural conditions capybara spend a significant portion of

their time in water. Compliance with space requirements means there should be both dry and aquatic portions of the primary enclosure, each which, at a minimum, provide sufficient space to allow the animal to make normal postural adjustments with adequate freedom of movement. The licensee informed the APHIS official that the capybara had access to its outdoor pool until the weather turned cold this past week. Correct by providing the capybara a water receptacle that is large enough and deep enough for it to submerge its body into the water and move in the water. Correct by January 27, 2016.

3.131(a)

SANITATION.

Section 3.131(a) Cleaning enclosures: Most of the floor of one of the shelters for the enclosure housing 14 goats and 17 sheep was covered with feces and soiled bedding. Standing in feces and soiled bedding may cause hoof problems. Feces and soiled bedding may also soil the animals, cause odors and are a potential disease hazard for the animals. Once the APHIS official identified the condition of the floor of the shelter, the licensee cleaned the floor. Correct by maintaining the floors of the sheltered area of the enclosures reasonably free of excreta/feces for the health and comfort of the animals from this day forward.

An exit briefing was conducted with the owner.
