### 3.125(a)

#### Facilities, general.

The chainlink fence surrounding the outdoor goat pen was sagging and detached from several of the upright supports, with some exposed sharp edges of wire along the bottom edge on one side. Sagging fence may fail to contain the animals adequately, and the sharp edges of wire could present a risk for injury. The facility must ensure the fence securely and safely contains the animals.

Correct by 30 May 2023.

This inspection and exit interview were conducted with the facility representative.
