Site: 004

VET TECH INSTITUTE OF
HOUSTON

Type: ROUTINE INSPECTION

Date: 14-MAY-2024

3.6(a)(1)

Primary enclosures.

At the time of inspection, a metal kennel containing a large mixed breed dog, located along the wall opposite the entry door in the dog ward, had a large area of rust along the lower left perimeter. The rusted area of the kennel measured 6.5 inches (W) x 5 inches (L) and was extensively corroded where parts of the metal was dark brown with gaps/holes and raised away from the surface. Extensive rust on a primary enclosure can negatively impact the structural integrity of the enclosure and consequently harm the animal contained therein. Primary enclosures must be designed and constructed of suitable materials so that they are structurally sound and must be kept in good repair.

Correct by: May 4, 2024

This inspection and exit interview were conducted with a facility representative.
