Type: ROUTINE INSPECTION
Date: 04-FEB-2025

3.150(a) Critical

Facilities, general.

On the morning of 11/16/2024, a 9-year-old female laughing kookaburra was found inside its enclosure with a severe injury to its left wing. The lower part of the left wing was missing and found outside of the enclosure. It was suspected that a predator tried to grab the bird through the 1 inch by 1 inch mesh enclosure and managed to pull part of its wing through. The bird was immediately provided veterinary care; however, it was humanely euthanized due to quality-of-life issues. The enclosure is no longer in use. Failure to maintain the bird enclosures in a manner which adequately protects all the facility's birds such as ensuring enclosures are predator proof may lead to potential injury, harm or death. Housing facilities for birds must be designed and constructed so that they are structurally sound for the species of bird housed in them. They must be kept in good repair, protect the birds from injury, and restrict other animals from entering that may negatively affect the welfare of the birds within.

Correct from this day, 02/13/2025, forward.

This inspection and exit interview were conducted with facility representatives.

Additional Inspectors:

TYLER FIELDS, VETERINARY MEDICAL OFFICER
