Type: FOCUSED INSPECTION

Date: 24-APR-2025

---

### 2.131(b)(1) Critical

#### Handling of animals.

Statements from facility staff and a veterinary record indicate that a keeper left open a gate to the outdoor enclosure housing 2 adult Stanley Cranes on 05 March 2025. Facility representatives state the birds are pinioned to prevent flying away. That day, one of the birds was found deceased in front of the striped hyena enclosure located across a public access pathway from the bird enclosure. A necropsy report shows that the head, upper neck area and left leg were missing from the animal. Facility representatives state the bird likely walked out of its primary enclosure through the open gate, arrived in front of the hyena enclosure and was attacked through the fence, causing its death. Failure to ensure an animal is adequately secured during husbandry and handling activity can result in their severe injury or death. Handling of all animals shall be done as expeditiously and carefully as possible in a manner that does not cause trauma, behavioral stress, physical harm or unnecessary discomfort.

Correct from this date forward of 28 April 2025.

This inspection and exit interview were conducted with the facility representatives.
