

## Inspection Report

Bailiwick Ranch Inc  
118 Castle Rd  
Catskill, NY 12414

Customer ID: **38131**  
Certificate: **21-C-0314**  
Site: 001  
BAILIWICK RANCH INC

Type: ROUTINE INSPECTION  
Date: 03-APR-2014

### 2.40(a)(1)

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

At the time of this inspection we were informed that this facility has changed veterinarians. The Program of Veterinary Care form (PVC) will need to be completed by the new attending vets.

\*\*\*To Be Corrected By: April 19, 2014

### 2.131(c)(1)

#### HANDLING OF ANIMALS.

At this time the newly acquired artic fox was being housed in a dog run style of enclosure. The barrier fence was ~2.5' - 3' away from the primary enclosure. However, due to the fact that the barrier fence was only one strand of rope and wrapped around short black posts it was easily manipulated and could give the public direct access to the fox. To ensure the safety of the fox and the general public, this barrier will need to be erected farther away from the enclosure and constructed of a more stable, substantial material.

\*\*\*To Be Corrected By: April 13, 2014

### 3.80(a)(1)

#### PRIMARY ENCLOSURES.

The ring tailed lemurs were being housed in the house at the time of this inspection. The roof of this enclosure has been constructed of a small wire mesh. However, the back left corner has detached from the walls and the mesh is now loose. There is also a small section of mesh by the light fixture that has detached from the other mesh panel. These areas now present jagged edges and possible escape routes for these primates. To ensure that they are securely contained and cannot be injured on this material it will need to be address.

\*\*\*To Be Corrected By: April 9, 2014

### 3.81

## Inspection Report

---

### ENVIRONMENT ENHANCEMENT TO PROMOTE PSYCHOLOGICAL WELL-BEING.

At the time of this inspection we were informed that this facility has changed veterinarians. The Primate Enrichment Plan will need to be approved by the new attending vets.

\*\*\*To Be Corrected By: April 19, 2014

### 3.125(a)

#### FACILITIES, GENERAL.

1. The first goat pen on the right, as you enter the zoo, is constructed of chain link fence attached to wood posts and rails. However, there are a few wood rails that are detaching from the posts and the chain link is detaching from the rails. This now allows for the front fence line to bow outward. To ensure that the animals cannot escape from this pen, this fence will need to be addressed.

\*\*\*To Be Corrected By: April 13, 2014

2. The goat pen in the middle of the zoo, across from the tiger exhibit, is constructed of chain link fence attached to metal posts and rails. However, the chain link fence has begun to detach from the metal rails in a few areas. Again to ensure that the goats do not escape, this fence will need to be addressed.

\*\*\*To Be Corrected By: April 13, 2014

3. The black bear enclosure has sections of chain link fence that are attached to the bottom wood rails and are then laid down on the ground of the primary enclosure to act as a "skirt". However, in the front, right corner the chain link has been pulled up and there are now jagged edges of fence exposed. The bear has direct access to this fencing. To ensure that he is not injured on this material it will need to be addressed.

\*\*To Be Corrected By: April 10, 2014

4. The goat and llama enclosure, which is by the new aviary, has a blue chain link fence attached to metal posts. Again, the chain link fence has begun to detach from the metal support posts. To ensure that the goat and llamas do not escape, this fence will need to be addressed.

\*\*\*To Be Corrected By: April 13, 2014

5. The dromedary camels were being housed in the aluminum sided riding ring at the time of this inspection. However, the wood planks that had been placed along the bottom half of the metal walls are in need of attention. Several wood planks, along the left side, have detached and are now either completely off the walls and laying on the ground or partially detached and one half is attached while the other half is on the ground. To ensure that these camels are not injured on these planks they will need to be addressed.

\*\*\*To Be Corrected By: April 13, 2014

## Inspection Report

---

### 3.127(c)

#### FACILITIES, OUTDOOR.

The brown bear enclosure has a cement block den attached to her outdoor chain link enclosure. However, during this inspection it was noted that the den was filled with 2"- 3" of water. This bear had no access to a dry area in the den portion of the enclosure. Due to the cold temperatures at night this den needs to be made available to this bear for shelter. This situation will need to be addressed.

\*\*\*To Be Corrected By: April 9, 2014

### 3.127(d)

#### FACILITIES, OUTDOOR.

The chain link fence behind the black and brown bear enclosures is in need of attention. The fence has begun to detach from the metal support posts and is now sagging and bowing. To ensure the integrity of this fence line this will need to be addressed.

\*\*\*To Be Corrected By: April 13, 2014

### 3.129(a)

#### FEEDING.

At the time of this inspection we were informed that this facility has changed veterinarians. Due to the fact that the tigers are not being fed a commercial diet, the new attending vets will need to review the current diets. The diets will need to be documented and approved by the new attending vets.

\*\*\*To Be Corrected By: April 19, 2014

### 3.131(c)

#### SANITATION.

The brown bear enclosure had an accumulation of strands of rope and soiled enrichment items. The ropes in the enclosure will need to be evaluated to ensure that they are not a hazard to this bear cub. To ensure that this enclosure is properly maintained and cleaned on a routine basis the soiled items will need to be removed.

\*\*\*To Be Corrected By: April 9, 2014

An exit briefing was conducted with the licensee.
