Type: ROUTINE INSPECTION
Date: 10-MAR-2015

3.50(d)

FACILITIES, GENERAL.

* Fecal waste accumulation was collecting on 50 to 60 percent of the available floor space in one nesting box. Two rabbits are in contact with the affected area located in outdoor housing. Unsanitary living conditions exist that could lead to potential contamination, odors or disease risks. The licensee must ensure that fecal waste is removed often enough to minimize any potential contamination, odors or disease hazards. Correct by 3/17/15.

3.125(a)

FACILITIES, GENERAL.

* An estimated two foot gap, ten feet in length was observed between enclosure fencing. Twenty different farm animals (goats, sheep, llama, alpaca, cattle and donkey) are in contact with the affected fencing located in outdoor housing. This affects the ability of enclosure fencing to contain the animals securely. In addition, It could lead to potential injury affecting the safety and health of the animals. The licensee must keep all fencing in good repair to protect the animals from injury and contain the animals securely. Correct by 3/17/15.

* Fiberglass surface on one Little Tikes children play unit is broken and jagged exposing a sharp edge. Twenty different farm animals (goats, sheep, llama, alpaca, cattle and donkey) are in contact with the affected fiberglass unit located in outdoor housing. A sharp, jagged edge could potential cause injury. The licensee must ensure that all surfaces are kept in good repair and protect the animals from injury at all times. Correct by 3/17/15.

3.125(c)

FACILITIES, GENERAL.

* There are two open sacks of feed located in the feed storage building. All feed supplies must be stored in a

manner that protects it from deterioration, molding or contamination by vermin. The nutritive value of the feed could be affected if it becomes deteriorated, molded or contaminated. Allowing animals to consume affected feed could lead to potential health issues. The licensee must protect all feed supplies from deterioration, molding or contamination by vermin at all times. Correct by 3/17/15.

3.129(b)

FEEDING.

* The bottom of one plastic food receptacle is cracked and broken with a sharp edge. The receptacle used by 20 different farm animals (goats, sheep, llama, alpaca, cattle and donkey) is located in outdoor housing. A chewed, roughened, jagged surface cannot be easily cleaned and sanitized and could potentially cause injury. In addition, it could harbor bacteria and other disease causing agents that can affect the health and wellbeing of the animals. The licensee must ensure that all receptacles can be properly cleaned and sanitized at all times. Correct by 3/17/15.

* The facility inspection done on 3/10/15 and exit briefing done on 3/11/15 were conducted with the licensee.
