Site: 001

JUNGLE ADVENTURES INC

Type: ROUTINE INSPECTION

Date: 15-AUG-2019

3.84(d) REPEAT

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

A rodent was observed inside the macaque primary enclosure, noticeable by the macaque's attempts to catch it. Two more were observed inside the macaque enclosure at the feeding area under a chair. A rodent was observed running across the floor, and many were heard running in the ceiling above, inside the off exhibit holding area for a macaque, ring tailed lemur, skunk and opossum. A possible rodent burrow was observed inside the lemur's off exhibit enclosure. A rodent was observed on top of the housing unit for the muntjac's primary enclosure.

Rodents can carry parasites and various diseases that could compromise the health and well-being of non human primates, as well as any other animals on exhibit. An effective pest control program must be established and maintained to promote the health and well-being of the animals on exhibit and reduce contamination by pests in animal areas.

This inspection and exit interview were conducted with the facility representative.
