### 2.40(b)(2)

### Repeat

#### Attending veterinarian and adequate veterinary care (dealers and exhibitors).

There was 1 guinea pig observed with a health condition requiring treatment in accordance with the Program of Veterinary Care or consultation with the attending veterinarian. A red and white adult guinea pig in Pen G had mild swelling of the foot pads of the back feet. There were areas where the skin appeared red and coated with debris. The guinea pig was not displaying signs of lameness and appeared alert and in good body condition. The licensee had not observed the condition and was not administering any treatment.

Swollen feet can be painful and if caused by an infection, can worsen and spread to other parts of the body and result in other health issues.

The licensee must communicate with the attending veterinarian to evaluate this animal and determine an appropriate plan for diagnosis and treatment.

This inspection and exit interview were conducted with the licensee.
