

## Inspection Report

Sierra Nevada Zoological Society  
10200 North Virginia Street  
Reno, NV 89506

Customer ID: **27094**

Certificate: **88-C-0204**

Site: 001

SIERRA NEVADA ZOOLOGICAL SOCIETY

Type: ROUTINE INSPECTION

Date: 29-APR-2019

### 2.40(a)(1)

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The veterinarian/practice identified by the facility as the attending veterinarian has been out to the facility this year, but after contacting the veterinarian, they have not agreed to be the attending veterinarian as part of a formal arrangement. A part time attending veterinarian or consultant arrangements shall include a written program of veterinary care and regularly scheduled visits to the premises in order to ensure the welfare of the animals.

Correct by 10 May, 2019

### 3.80(a)(2)(i)

#### PRIMARY ENCLOSURES.

In multiple non human primate enclosures, there were sharp points from fencing materials that had been cut and left sharp, or had broken creating sharp points or edges. Specifically in the older female lemur shelter, the floor had separated, sagging and creating sharp points and in the inside enclosure for the three younger lemurs, the entry way had been created by bending the wire mesh, leaving multiple areas of sharp points. In the Patas monkey shelter, there were bolts sticking out, and loose wires were present throughout the sheltered areas for the nonhuman primates. Primary enclosures for non human primates must be structurally sound and kept in good repair to prevent injuries to the animals.

Correct by 15 June 2019

### 3.127(d)

#### FACILITIES, OUTDOOR.

In various areas around the facility, the perimeter fence did not meet the requirement of 8 feet for the potentially dangerous animals held at this facility. In several areas the measured height of the fence was 7 feet, or there was a large gap, measuring approximately a foot, under the fence. In the area of the facility near the baboons, there was fencing material stored adjacent to the perimeter fence, reducing the effective height of the perimeter fence. The perimeter fence is to protect the animals in the facility by restricting animals and unauthorized persons from going through or under it, and so that it can function as a secondary containment system for the animals in the facility.

## Inspection Report

---

Correct by 31 July, 2019

### 3.131(c)

#### **SANITATION.**

In the off exhibit holding area, there was a large dumpster that was overflowing and piles of trash, bedding and fecal material on either side of it. The barn area was cluttered and full of debris. In various places around the grounds, trash and other items were discarded and not picked up. Buildings and grounds shall be kept clean and in good repair in order to protect the health of the animals and to facilitate the prescribed husbandry practices.

Correct by 31 May 2019

This inspection and exit interview were conducted with facility representatives.
