Type: ROUTINE INSPECTION

Date: 04-OCT-2017

### 3.126(b)

#### FACILITIES, INDOOR.

Currently there is a clouded leopard that is in the back room of a trailer, which also contains approximately 3-4 domestic cats in enclosures. The smell of ammonia is extremely strong inside of the trailer, primarily gathering in the back room with the leopard. While there is an air conditioner on, the windows and doors are closed, with the presence of full litter pans, and wet papers from approximately 1-2 days from the leopard. This is adding to the confined area, which increases the strong smell of ammonia fumes.

The lack of ventilation to remove urine and ammonia odors can be a source of discomfort and possible health issues for the regulated animals.

There must be enough ventilation to provide clean air to the rooms where the regulated animals are housed. All dirty litter pans and papers should be cleaned often enough to prevent the buildup of odors and ammonia in the air.

To be corrected by: October 4, 2017.

### 3.128

#### SPACE REQUIREMENTS.

The clouded leopard has been put back into a smaller enclosure (approx 4ft x 2.5ft x 2.5ft) for the past 2.5 months, kept in the back room of a trailer on top of an old bed. The leopard is unable to stand and stretch completely in this enclosure or complete normal postural movements, due to the restricted spacing. This animal continually paces in a tight circle and did not stop moving, during the inspection. The leopard is let out of the enclosure once per day in the presence of the licensee, however an adult leopard required more room for longer periods of time. There is supposed to be new accommodation being made within the next few months according to the owner, however this small space is still keeping the animal from being able to partake in normal postural movements for the majority of the day.

The lack of proper space for a regulated animal can be a source of physical and behavioral stress.

## Inspection Report

---

The licensee must provide more space for the leopard to be able to maintain normal postural movements and/or increase the time she can be free from the enclosure to properly stretch and move around, until the new enclosure is completed by December 20, 2017.

To be corrected by: October 11, 2017

Inspection and exit interview conducted with licensee.
