SCOTT ALLEN

Type: ROUTINE INSPECTION
Date: 25-AUG-2022

2.40(a)(2)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

During inspection, a sheep with a dark brown/white face and tan body with white legs was identified with an abnormal right eye. The eye was uniformly white and moderately sunken into the eye socket. The red tissue at both corners were protruding and covering parts of the eye. A facility representative explained that approximately 1 month ago, the sheep was struck by another causing an eye injury. The facility treated the sheep with antibiotics but did not consult with or get approval from the veterinarian on the course of treatment. The veterinarian was not given proper authority to oversee adequacy of care. When the veterinarian is not given the appropriate authority, the provision of veterinary care may be inadequate or inappropriate. The licensee must assure that the attending veterinarian has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use. To be corrected by September 9, 2022.

2.75(b)(1)

Records: Dealers and exhibitors.

The disposition information for 2 llamas, 5 kangaroos, and a camel were not documented. The acquisition information for 2 pigs, 12 goats, 1 zebra were not documented. Several of the missing acquisition and disposition information are concerning animal deaths and births. Without records which fully disclose the animal's acquisition/disposition information,

Inspection Report

legal and medical information traceback is not possible. Develop and maintain records disclosing the required acquisition/disposition information including the date, name, address, and USDA number if applicable of the person from whom the animal was acquired from or transferred to. The records shall include any deaths and any offspring born of any animal while in his or her possession or under his or her control. To be corrected by December 2, 2022.

3.78(d)

Outdoor housing facilities.

The facility does not currently have a continuous perimeter fence around the outdoor enclosures for the Giraffe, kangaroos, capybaras, lemur, and porcupine. There is no perimeter fence of adequate height on the creek side or on the entrance side. The facility's variance approval letter was issued in 2002 and referred specifically to deviation from section 3.127 which covers subpart F animals. Therefore, the facility does not have approval to deviate from the perimeter fence requirements for non-human primates such as lemurs. Furthermore, per a facility representative, the facility's inventory has changed significantly in the last 20 years and thus the basis for the variance approval may no longer be valid. A continuous perimeter fence is important to function as a secondary containment for the animals and to prevent unauthorized people or animals to enter the facility. The facility shall construct a 6 feet tall perimeter fence at least 3 feet away from the outdoor primary enclosures for the above listed animals or shall obtain a variance from the Regional Office. To be corrected by January 2, 2023.

3.81

Environment enhancement to promote psychological well-being.

Two areas of deficiency were identified with the non-human primate enrichment plan:

- The plan did not describe the special attention provided to the singly housed black and white ruffed lemur, unable to hear and see non-human primates of his own or compatible species. A complete and well documented plan regarding the special attention provided to singly housed individuals is extremely important to ensure the psychological well-being of the

Inspection Report

animals.

- The documented plan described providing toys, swings, ropes, and hand rings in the enclosure. At the time of inspection, perches but no other item were present in the enclosure. The enrichment plan must be executed as written and updated when changes occur to adequately reflect what is needed to maintain psychological health.

A well-documented and implemented enrichment plan is essential to prevent distress and maintain the psychological well-being of the non-human primates. The enrichment plan must be developed in accordance with the currently accepted professional standards and as directed by the attending veterinarian. To be corrected by November 2, 2022.

This inspection and exit interview were conducted with facility representatives.
