Customer ID: **2114**

Certificate: **21-C-0027**

Site: 001

Zoological Society of Buffalo Inc

Type: ROUTINE INSPECTION

Date: 12-SEP-2023

3.80(a)(1)

Primary enclosures.

In the rainforest exhibit for the squirrel monkeys, the ground has settled around the shift doors at the entrance of their holding area. This settling of mulch has exposed fabric liner which appears frayed and needs to be removed to reduce any potential hazard to the animals. This needs to be addressed to keep this section of the enclosure in good repair.
Correct by: Sept 22, 2023

3.125(a)

Repeat

Facilities, general.

*** Several bolts in logs along the capybara exhibit area were protruding up out of the logs. The logs have settled over time, exposing the bolts which are protruding and pose a potential safety hazard to the capybara. These bolts need to be removed for the safety of the capybara.

*** The fabric weather strip along the slide door for the Tuffed deer enclosure is in disrepair and appears to have been chewed along the bottom portion of the door. This poses a potential ingestion hazard to the deer. This section of weather fabric needs to be replaced or repaired for the safety of the deer and to keep the enclosure in good repair.

*** The bighorn sheep surface rockwork is in disrepair and needs to be addressed. Several large sections have cracks and missing sections of the surface layer deteriorating along the right side of the exhibit just under the shelter area. This can pose a potential hazard for the animals and needs to be addressed to keep the enclosure in good repair.

This inspection and exit interview were conducted with a facility representative.

Additional Inspector: Dr Jason Sifkarovski, Veterinary Medical Officer
