Type: ROUTINE INSPECTION  
Date: 22-MAY-2025

---

### 3.126(d)

#### Facilities, indoor.

The building housing multiple species of animals including a pig, rabbits, and a sheep has a drain near the large door opening that is full of waste and debris. The large drain is clogged and cannot remove waste material from the area. Standing waste water is an attractant to flies and pests, and is also a source of noxious odors that could affect the animals. A suitable sanitary method shall be provided to eliminate excess water from indoor housing facilities. If drains are used, they shall be properly constructed and kept in good repair to avoid foul odors and installed so as to prevent any backup of sewage. The method of drainage shall comply with applicable Federal, State, and local laws and regulations relating to pollution control or the protection of the environment. The facility must clear the clogged drain and maintain all facility drainage as needed to protect the welfare of the animals.

Correct by 30 May 2025

### 3.131(c)

#### Sanitation.

The enclosure for two arctic foxes had been cleaned using a chemical substance. The chemical container was left unattended inside the enclosure with the foxes. Premises including all animal areas, buildings and surrounding grounds must be kept clean, be in good repair, and properly maintained in order to protect the health and well-being of the animals and to facilitate the prescribed husbandry practices. This includes properly storing and maintaining potentially harmful substances/items in a manner or a location which adequately protects the animals. A system of maintaining effective housekeeping practices must be in place to ensure the health and well-being of the animals. The chemical was removed at the time of inspection.

Corrected at the time of inspection

This inspection and exit interview were conducted with a facility representative.

Additional Inspectors:

MICHAEL TYGART, VETERINARY MEDICAL OFFICER
