Site: 001

EAST MAUI ANIMAL REFUGE

Type: ROUTINE INSPECTION

Date: 08-JUL-2016

3.1(c)(1)

HOUSING FACILITIES, GENERAL.

In the cat enclosures there are surfaces that are not constructed or maintained in a manner that allows them to be readily cleaned and sanitized.

There is a section of dry wall above the cat perches in the cat rooms where, in multiple places, the cats have scratched into the drywall, and the surface is damaged and not impervious to moisture, which impedes cleaning and disinfecting.

In an isolation ward, there are two cat enclosures that have significant rust, which can impede cleaning and disinfecting.

Although significant improvements are in progress, there are still some areas in the cat area have wood that is deteriorated, or that has been worn bare, with no sealant, which could impede cleaning and disinfecting.

Surfaces in the cat area should be constructed of appropriate materials, maintained in good repair so they can be readily cleaned and disinfected, so as to maintain a healthy environment for the cats.

To be corrected by 9/15/16.

3.125(a)

FACILITIES, GENERAL.

The enclosures for the deer and goats have some fencing that is in ill-repair, and may pose a hazard to the animals. Some sections of fencing are bent outwards, with a gap between the cement flooring of the enclosure, and the fence. Where the fencing comes together there are gaps with wire ends protruding, that could pose a risk of entanglement and injury. A gate has mesh chain link fencing that is pushed down, and poses a risk of entanglement. Some fencing does not appear to be sturdy enough to resist pressure that could be applied by the animals.

Inspection Report

Enclosures should be maintained in good repair so that they protect the animals from harm or escape.

To be corrected by 9/15/16

An exit interview was conducted with the facility representatives.
