PATRICK CLANCY

Type: ROUTINE INSPECTION
Date: 20-JUL-2016

3.80(a)(2)(1) REPEAT

PRIMARY ENCLOSURES.

The rhesus macaque and the capuchin enclosures had wood branches in them in order to provide perching areas. These branches were held in place with zip ties, however the ends of the zip ties were long and showed evidence that the animals had been chewing on them. This could lead to injury if the animals ingested the plastic material. Enclosures need to be maintained in order to protect the animals from injury. This was corrected before the conclusion of the inspection.

*****Corrected at the time of inspection

3.81(b) REPEAT

ENVIRONMENT ENHANCEMENT TO PROMOTE PSYCHOLOGICAL WELL-BEING.

The capuchin, rhesus, snow macaque and lemurs did not have toys provided in their enclosures. According to the facilities' Nonhuman Primate enrichment plan which had been approved by the Attending Veterinarian, toys will be provided for these animals at all times. Various material was in the enclosures providing areas to perch, such as branches and a swing in the snow macaque enclosure. The caretaker stated that the toys had not been offered yet since they had just set up and it was opening day of the fair. Various types of enrichment must be provided at all times for these animals in order to enhance the environment and allow for species specific behavior. This was corrected before the conclusion of the inspection.

*****Corrected at the time of inspection

3.125(a) REPEAT

FACILITIES, GENERAL.

The wire fencing surrounding the pygmy goat enclosure had a corner bent upward, creating a large hole leading into the adjacent pen. This could lead to injury if the goat were to get caught in this area. Outdoor housing facilities shall
