CLOVIS, NM 88101

Customer ID: **3489**  
Certificate: **85-C-0006**  
Site: 001  
CITY OF CLOVIS

Type: ROUTINE INSPECTION  
Date: 20-SEP-2022

---

### 2.75(b)(1)

#### Records: Dealers and exhibitors.

\*\*\*At the time of the inspection, the facility representatives could not produce acquisition documentation for three adult guinea pigs and one adult sugar glider which were all recently donated to the zoo.

\*\*\*There is incomplete acquisition information for one male, juvenile Bactrian camel and incomplete disposition documentation for one adult, male Asiatic water buffalo. The partial paperwork for these two animals lacks a USDA license number for the seller of the Bactrian camel and the receiver of the Asiatic water buffalo, without a vehicle license plate number and state or the number of a state-issued driver's license or photographic identification card.

Complete documentation of acquisition and disposition is required for all animals to ensure their proper use. The licensee must make, keep and maintain records or forms which fully and correctly disclose the information as detailed in Part 2, Subpart G, Section 2.75(b)(1)(i-vii) of the Animal Welfare Act and Animal Welfare Regulations for animals purchased or otherwise acquired, owned, held, leased or otherwise in his or her possession or under his or her control, or which are transported, sold, euthanized or otherwise disposed of by that licensee. The records shall include any offspring born of any animal while in his or her possession or under his or her control.

TO BE CORRECTED BY 09/26/2022

## Inspection Report

---

### Contingency planning.

At the time of the inspection, the licensee did not have a written contingency plan in place.

A written emergency/contingency plan is required to help ensure animal health and well-being in the event of an emergency or disaster; without this tool, animals may suffer illness, injury or death due to unpreparedness should an emergency or disaster strike. The licensee must develop, document and follow an appropriate plan to provide for the humane handling, treatment, transportation, housing and care of their animals in the event of an emergency or disaster (one which could reasonably be anticipated and expected to be detrimental to the good health and well-being of the animals in their possession). The contingency plan must include all of the information and documentation as detailed in Section 2.134(a-c) of the Animal Welfare Act and Animal Welfare Regulations.

TO BE CORRECTED BY 10/25/2022

### 3.75(a)

#### Housing facilities, general.

In one of the spider monkey enclosures, the corrugated metal wall separating the indoor and outdoor portions has an area several feet long that has areas where the metal has rusted through and created holes with sharp edges.

Sharp metal and holes are a hazard since animals can come into contact with them, resulting in injury or entrapment. All enclosures must be constructed and maintained in good repair to protect the animals from illness or injury.

TO BE CORRECTED BY 10/11/2022

### 3.127(d)

#### Facilities, outdoor.

There is an approximately eight foot section of perimeter fencing located near the marmoset enclosure that is in disrepair, causing this portion of the fence to measure only 90.5" in height. This is below the required minimum of 96" in height for the species inventoried at the time of inspection.

## Inspection Report

---

The fence is inadequate because it cannot serve as a secondary containment system for the animals housed in the facility and cannot prevent other animals and unauthorized persons from entering. The licensee must assess all perimeter fences at the facility for adequate height and structural integrity and modify the existing fence(s) or install a different perimeter fence or fences of at least 8 feet in height. The perimeter fence(s) must remain a minimum of three feet from the primary enclosures and constructed so that the fence(s) protect(s) the animals by restricting entry of outside animals and unauthorized persons from going through it, or under it, or having contact with the animals in the facility.

TO BE CORRECTED BY 10/11/2022

### 3.129(a)

#### Feeding.

\*\*\*There is one open bag of canine food and one open bag of unidentified, pelleted feed on the shelves in the commissary. The facility representative disposed of the open feed at the time of inspection. (CORRECTED AT THE TIME OF INSPECTION)

\*\*\* There is a container of insect spray stored on a shelf above a counter and utensils used for food preparation. The facility representative relocated the can of insect spray at the time of inspection. (CORRECTED AT THE TIME OF INSPECTION)

\*\*\*The hay stored inside the haybarn is contaminated by bird feathers and feces.

Food that is not properly stored is subject to deterioration and contamination due to microbial growth or pests and vermin, which can lead to animal illness. The licensee must ensure that all food is stored to ensure it remains wholesome, palatable and free from contamination in order to maintain all animals in good health.

TO BE CORRECTED BY 10/01/2022

### 3.131(c)

#### Sanitation.

## Inspection Report

---

\*\*\*The floor of the main commissary is in disrepair to the point that adequate cleaning is difficult or not possible, as the tiles are missing, broken and/or lifting in several places, where dirt is seen trapped in the resulting spaces. There are also areas of the floor and shelving that are not in disrepair but are covered in dirt, with cobwebs and rodent feces noted.

\*\*\*The haybarn used for storage of hay and bedding is untidy, with accumulations of trash (empty plastic bags, torn bags of wet and molding material and broken pallets) as well as animal feces; the entire floor is covered in several inches of old, loose hay.

Premises that are not kept clean and in good repair do not facilitate adequate husbandry; they also attract vermin and pests and can result in contamination of food. The licensee needs to keep facilities in good repair and establish and maintain an effective method and schedule to keep the premises, including the food preparation area and all food storage areas, clean and sanitary.

TO BE CORRECTED BY 10/04/2022

### 3.131(d)

#### Sanitation.

\*\*\*At the time of the inspection, an excessive number of flies are noted to be swarming inside the commissary and landing on counters and equipment used to prepare food. Mouse feces are also seen on the commissary floor. There are no methods in place to prevent or control the entry of insects or other vermin.

\*\*\*Inside the haybarn, there are feathers, bird (and possibly mammalian) feces on the hay and straw bedding, as well as on the walls and floor of the structure. There are no methods in place to prevent or control the entry of insects, birds or other vermin.

The presence of pests and vermin encourages contamination of food preparation areas and utensils, as well as the food itself - which can lead to animal illness. The licensee must establish and maintain a safe and effective program for the
