Certificate: **74-C-1052**
Site: 001
Peeps and Creeps Inc.

Type: ROUTINE INSPECTION
Date: 11-SEP-2024

2.75(b)(1)

Records: Dealers and exhibitors.

At the time of inspection, the licensee does not have records of acquisition for two adult canaries that were added to the inventory since the last inspection.

Records containing the required information for animals disposed of, or acquired for, use in regulated activities (including those offspring born on premises) are necessary to accurately track animals to ensure their humane care and use. The licensee must make and maintain records of the inventory, acquisition and disposition of all animals which fully and correctly disclose the required information.

TO BE CORRECTED BY OCTOBER 2, 2024

3.80(a)(2)(i)

Primary enclosures.

The indoor portion of the primary enclosure housing one adult male ring-tailed lemur named "Maurice" has rusted areas of metal, some of which have rusted through on the lower metal bars to produce holes and sharp points.

Rusted metal is porous and cannot be easily cleaned and sanitized; rusted-through metal creates sharp points that can injure the animals. The licensee must ensure that any surfaces that come in contact with non-human primates are free of excessive rust that prevents the required cleaning and sanitation or that affects the structural strength of the surfaces, and that all surfaces are free of jagged edges or sharp points.

TO BE CORRECTED BY OCTOBER 2, 2024

3.125(a)

Repeat

Facilities, general.

In the enclosure housing one adult, male African crested porcupine there is an area of approximately eight square feet under a bridge feature where the animal has dug and exposed the buried wire grid paneling, creating spaces large enough for his feet to pass through.

Exposed wire with large holes under an animal can result in injury or entrapment. A system of facility monitoring should be in place to ensure all enclosures are structurally sound and maintained in good repair to protect the animals from illness or injury.

Inspection Report

Cleaning, sanitization, housekeeping, and pest control.

Accumulations of mouse droppings are seen in numerous places on the floor throughout the indoor portions of the facility, including the commissary area. Food dishes and plastic storage totes in this area also had mouse feces in and on them. Two adult feral mice were seen running in the commissary and aviary room. Additionally, a food prep area in the commissary has an area on the floor under the sink that has accumulated food waste and other wet debris, with cockroaches present.

Wild rodents and cockroaches can harbor or spread parasites and disease-causing microbes that can contaminate food and food prep areas and cause injury or illness to the animals. The licensee must establish and maintain a safe and effective program for the control of insects, ectoparasites, and avian and mammalian pests so as to promote the health and well-being of the birds and reduce contamination by pests in animal areas. Insecticides, chemical agents, or other pest control products that may be harmful to the birds must not be applied to primary enclosures and other bird contact surfaces unless the application is consistent with manufacturer recommendations or otherwise approved for use and does not harm birds.

TO BE CORRECTED BY OCTOBER 16, 2024

This inspection and exit interview were conducted with facility representatives.
