3.10(a)

Watering

On the evening of October 25, 2024 an adult female beagle (#1691T) was inadvertently locked out from its water source overnight. A facility veterinarian immediately assessed the dog the following morning to confirm there were no serious health concerns as a result of the incident. The dog was found bright, alert, active and drank moderately when offered water. The veterinarian found mild signs of dehydration but no signs of illness or injury, and the dog received subcutaneous fluids. An investigation by facility staff revealed the door between the two sides of the kennel was not functioning properly and may have caused the dog to be locked out. The door was repaired and functioning properly at the time of inspection.

Failure to provide continual access to water can result in discomfort and serious dehydration. The facility must ensure that potable water is made continuously available to all dogs, unless excepted by the attending veterinarian or excepted as provided under section 3.17(a).

CORRECTED BEFORE THE TIME OF THIS INSPECTION CONDUCTED ON 12/03/2024

This inspection and exit interview were conducted with facility representatives.
